

# New Land of Opportunity - Hills and Lakes

*make holes for lakes  
from holes make hills  
from canal pump water  
to canal drain land*

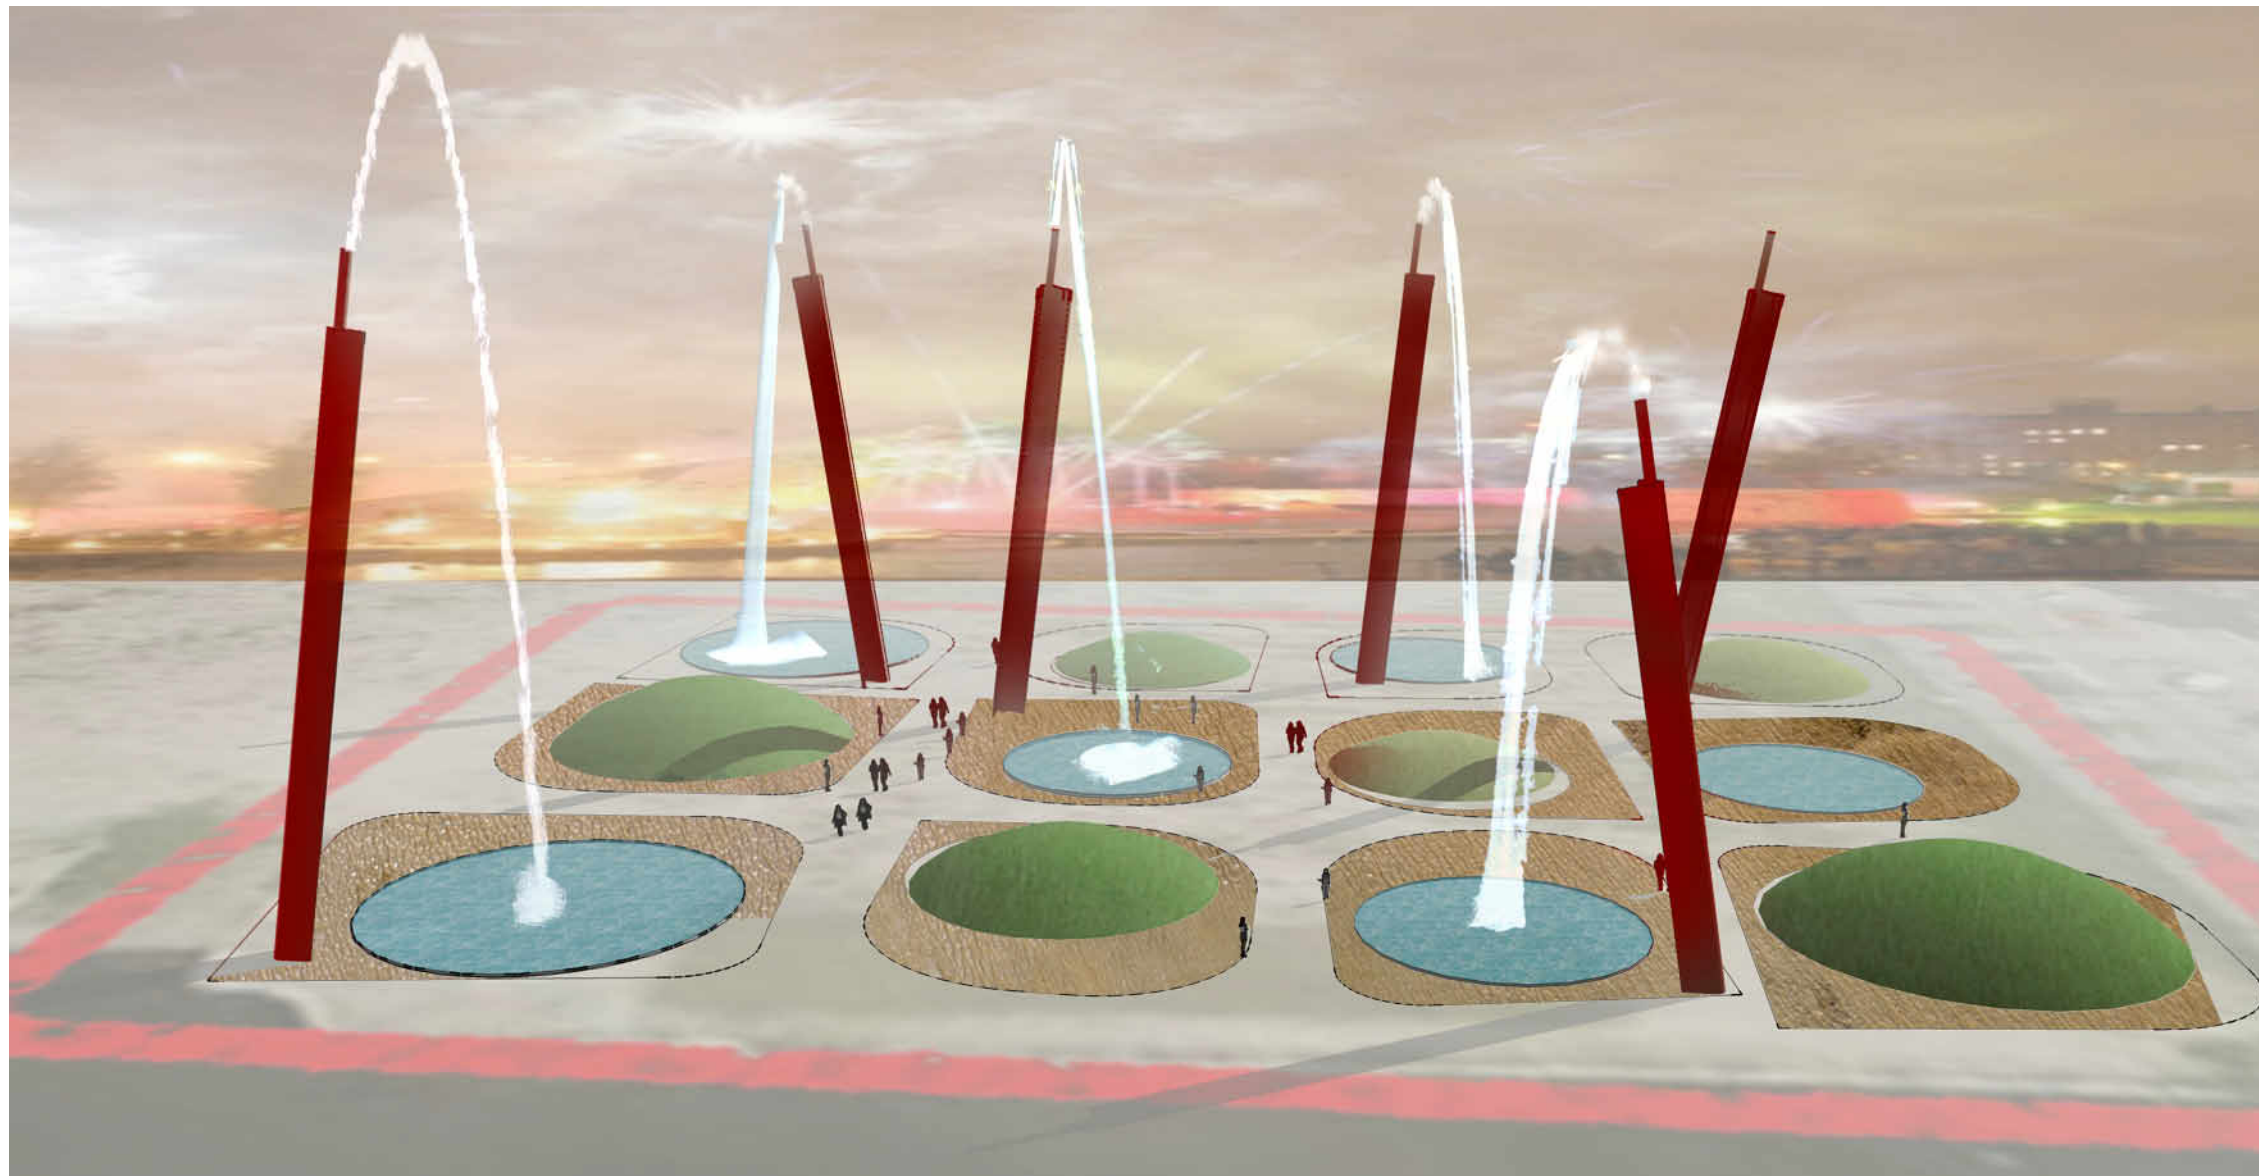

*This idea consists of 6 hills and 6 lakes, the hills of soft grass and the lakes of shallow water. 6 tall fountains replenish the lakes adding drama and excitement. The fountains are illuminated along the shaft so the space is continuously illuminated. Sand wraps around each of the 12 elements with scrub grass filling in the remainder. The idea is to be robust, simple to execute and maintain that changes according to the seasons. It is a background for people to engage in an active and a passive manner.*

# New Land of Opportunity - Hills and Lakes

*spring see flowers  
summer take picnics  
autumn fly kites  
winter skate around*

*By changing the topography using the materials of the site and with some judicious improvements (sand, water and grass) a new land (scape) is possible and within a small time can be activated. When the plans are enabled the sculptural fountains can be redeployed to the canal and the land reconfigured.*

# New Land of Opportunity - Hills and Lakes

*new games to play  
new resources to harvest  
new signs of hope  
new land of opportunity*

*Though temporary the site need not be dull or unattractive. Feeding water to the ponds will add sound and vision. Illuminated poles enliven the evening. Wind power pumps the water. People enjoy the feeling.*
